

General

When attempting to setup the database file index it is responding to me: "Invalid response from the database. Password could not be set."

This could be one of three things.

1. You are not using the latest version of OfficePool (See about box and make sure it's the current year and matches the [latest version](#)).
2. You have not registered OfficePool for the current year
3. You do have a connection to the internet.

Unique solution ID: #1080
