

General

Is there a way to import all of last year's settings into this year's file?

Open up last year's file and then do a "Save As...". Then you can remove all your entries.

If you are using the database option, you will need to re-enter your database settings (Web From toolbar item, "Database Settings"), otherwise the previous year's values will be used and after submitting the form it will state something like, ""The Pool Manager (your email) is not registered for 2015. Your picks were not recorded or sent."

Unique solution ID: #1089
