

Reports & Templates

When I open up the Bracket.htm file (In the 'OfficePool Files' folder or when I create my web pages) in a web browser I get an error. Why is this?

'Bracket.htm' is a JavaScript web template for the links located on another report such as Standings. **You should never have a direct link to this page.**

This file allows you to upload only one file as opposed to each individual bracket, which would save you a lot of time if you had 100s of entries.

If you want to be able to link directly to a specific bracket, deselect the "Use Javascript for Creating Brackets" option under the Reports Preferences. This may be an issue for large pools as one file per entry will be created.
