

# Brackets

## How can I omit email address from individual brackets? It's not an option when individual brackets are generated.

Assuming you mean when you don't use the Javascript brackets option... You would need to modify the bracket template. Here are the steps:

1. Select Reports -> Edit Templates... menu item
2. Select the Bracket Template you are using from the popup menu on the top right of the window. Edit or Copy/Paste contents into an HTML editor or Text editor
3. Search for and remove "#email#" (without the quotes)

Now when you create a bracket, the email field will not show up.

Unique solution ID: #1051
