

Web Entry Form

Server or Connection problem: Database access returned an invalid response

This appears to be isolated to Windows users and also shows up as error: "Invalid response from database. Password could not be set"

If you are using OfficePool 2013 1.0.2, you will need to either downgrade to 1.0.1 or download a newer release, if available.

Here is a link to version 1.0.1:
