General

Help! I get an invalid serial number even though I registered for OfficePool.

This is also related to "Not a valid serial number. Please try again"

A couple things to check:

1. Make sure you have the latest version of OfficePool. (http://officepool.pachysoft.com/)
2. First try the copy/paste method. If that doesn't work, try typing it in manually. Some email programs copy/paste hidden characters and OfficePool will not recognize this.

Unique solution ID: #1084
