

General Usage

I would like the order in my basketball stats to be by player number. How do I get it set to their number. I have entered the numbers in my roster and have the roster showing up in numeric order but can't get the stat input page to be in that order.

You can re-order the input by selecting the row and then dragging it to the position you like.

After you set it up how you want it for for one game, simply select that game and then, with the game selected, add a new game (e.g. select the '+' button). This will add a new game with the same order (among other attributes.)
